HKZ 700

Hunkeler Carton Shredder HKZ 700

The Hunkeler Carton Shredder is ideal for the shredding of cardboard residues in the punch waste area (strips & large surface cartons), E-commerce & cardboard containers. Thanks to the special form and arrangement of the blades, an optimised collection of narrow strips up to large cardboard boxes is possible.

Using a frequency converter, the rotation of the cutting work can be set up for the waste quantity expected. Feeding is either piecemeal by hand or continuously via a conveyor belt, as required. The shredder particles from the HKZ are ideally sized for transport by underground conveyor belts. The particles can also be removed with a pneumatic suction & compression system from Hunkeler Systeme AG.

Special Features:

- For use with corrugated and grey carton
- Small standing area of 1m²
- Interface for machine connections
- Low wear and low noise level
- Low energy consumption
- Low maintenance
- Particle sizes of 50x200mm
- Suitable for 24/7 operation

Use in Bobst application:

- On Bobst Mastercut machines, intercut between the gripper edges is no longer necessary
- Disruption-free material feed via conveyor belts
- Increased throughput

Use in Box-on-demand application:

- No need to change the container
- Reduced space requirements
- Dust-free production with suction
